

POLYX®-OIL 2K Pure

Polyx®-Oil (Component A): Binding agents

- Based on the renewable plant raw materials: sunflower oil, soya oil and thistle oil

Waxes

- Based on the renewable plant raw materials: carnauba wax and candelilla wax
- Paraffin

Earth

- Mineral origin, silica acid and swelling clays (argillaceous rock)

The used mineral earths have been purified from all poisonous ingredients (e.g. heavy metals) and are physiologically safe.

Additives

- Siccatives (are obtained from the respective minerals and are lead-free)
- Ketoximes
- Polysiloxanes (on basis of silicic acid)

Hardener (Component B): Characteristics

- Low viscosity, aliphatic polyisocyanate resin

Further information

- The handling of coating materials containing reactive polyisocyanates and a residual content of monomeric HDI requires suitable safety measures (see safety data sheet). Therefore they may only be used in industrial or professional applications.
- **Not suitable for use in homemaker (DIY) applications.**

Further details concerning technical characteristics etc. can be obtained from the respective product information.
